Our off-the-shelf products are often used as OEM products by our customers.

OEM products are not intended for the end user but used as a component of a whole product which is produced and sold by a VAR (Value-Added Reseller).

You as manufacturer of a whole product benefit from the following advantages:

➤ Quality:

To some extent our off-the-shelf products are field-tested since years and must pass an extensive product test.

➤ Cost reduction:

At higher quantities you benefit from special conditions.

➤ Increase of productivity:

If taking advantage from our know-how in the field of measurement technology you can concentrate on the development of your entire product.

➤ Your own product line / branding:

With your design, your label (branding) the bmcm product becomes yours and for the end customer you are the manufacturer, we are just a component supplier. The responsibility for the correct installation and use of the bmcm products is on your side.

Examples for OEM products:

- Measurement amplifiers
- Filter modules
- PC/104 systems
- Connection systems
- USB measuring systems
- I/O interfaces

OEM inquiries to BMC Messsysteme GmbH should include the following information:

Product name: _____
